

# Interaction Design Document (IDD) v1

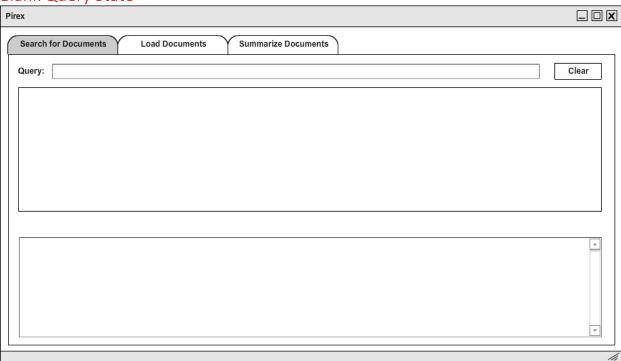

#### Introduction

Screen states are presented first as page layout diagrams, then these screen states are combined into a storyboard.

Screen layout diagrams use an MS Windows GUI style, but any style is acceptable.

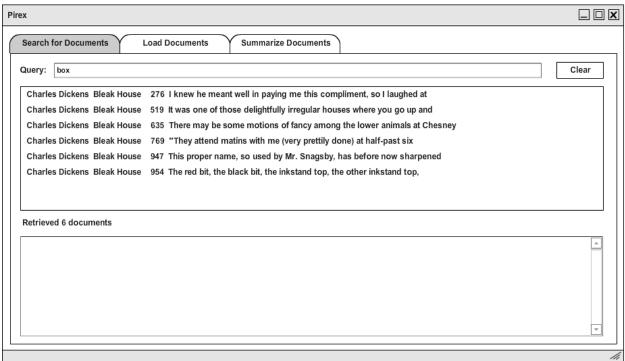

#### Screen States

#### Blank Query State

- 1. When the program starts up the data store (if any) must be loaded and the system must be ready to search.
- 2. Users must be able to type queries into the query text box.
- 2.1 Pressing return in the query text box must cause a search to occur, and the UI must switch to the Search Results State.

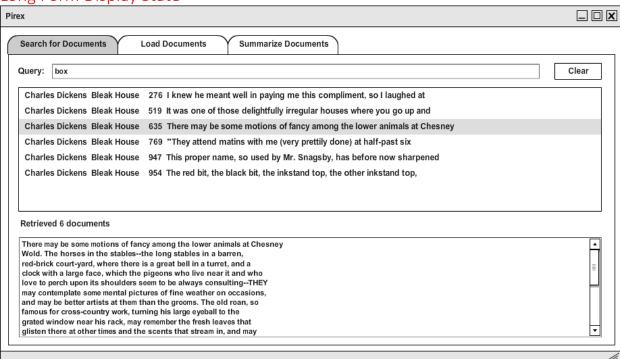

### Search Results State

This diagram illustrates the result of searching with the query "box." The result is six documents from *Bleak House* by Charles Dickens.

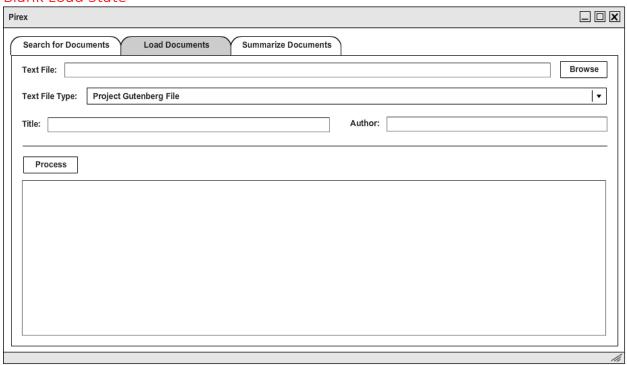

- 1. The top textbox must show the short form display.
- 1.1 A scroll bar must be added to the text box if necessary.
- 2. Selecting an item from the results display must cause the UI to switch to the Long Form Display state.

### Long Form Display State

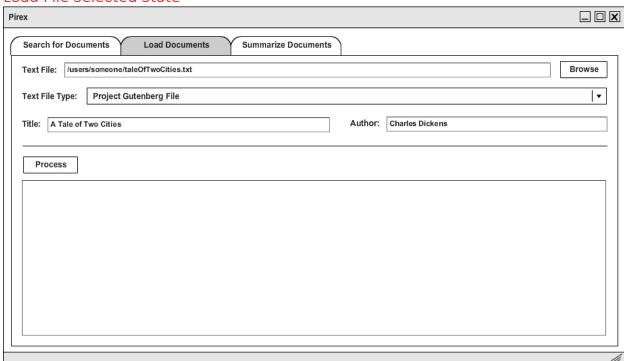

- 1. When a document in the short form display is chosen, the entire document must be shown in the bottom text box in the long form display.
- 2. Choosing another document must change the contents of the long from display to the selected document.

### Blank Load State

- 1. The Process button must be disabled until the Text File text box is non-empty.
- 2. The Browse button must open a standard modal file chooser and switch the UI to the File Chooser state (not shown in these page layouts).
- 3. The File Chooser result must be put in the Text File box.
- 4. The Text File Type combo box must have Project Gutenberg File as its default and may have other values if other sorts of files can be processed.
- 5. When a file is specified in the Text File box, the UI must switch to the Load File Selected state.

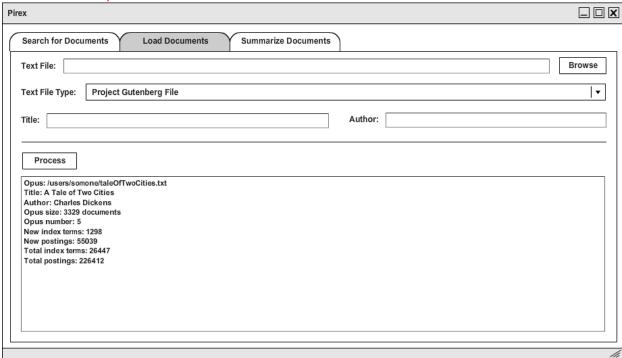

### Load File Selected State

This diagram shows the example of choosing to load the Poject Gutenberg file for *A Tale of Two Cities* by Charles Dickens.

- 1. If a text file is specified and its file type is Project Gutenberg File, then the title and author must be extracted automatically and placed in the Title and Author text boxes.
- 2. The Title text box must be editable.
- 3. The Author text box must be editable.
- 4. The Process button must be enabled and the summary box at the bottom must be cleared.
- 5. When the Process button is pressed the file must be loaded and the UI must switch to the Load Summary state.

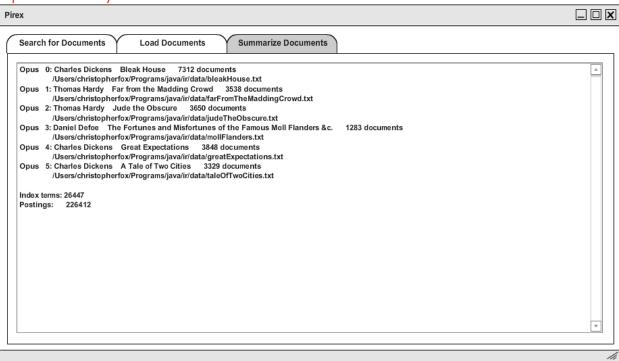

## Load Summary State

This page summarizes the document loading process for the A Tale of Two Cities.

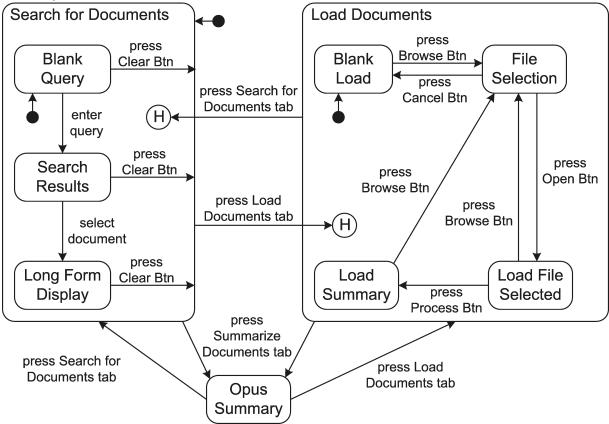

- 1. The Text File, Title, and Author text boxes must be cleared.
- 2. The Text File Type combo box must be reset to its default.
- 3. The Process button must be disabled.
- 4. The results of the loading process must be displayed in the text box at the bottom.

### **Opus Summary State**

This diagram shows a sample of the opus summary state screen for a document store that holds six documents.

## 3. Storyboard

1. The user must be able to exit the program using the title bar controls.
